

Corrosion Test With AR4200 CLP - Vs - KG 4 Gun Oil

As a barrel & metal protector AR 4200 Nano Tungsten Disulfide is outstanding. The (Ws2) will maintain the barrel or metal and prevent corrosion. AR4200 CLP forms a dry hard surface on metal alloy and can withstand very extreme temperature environments.

We have various barrel sections from a gun barrel .22 cal Browning Buckmark

1. Both barrel sections have been coated with their own lubricants.
2. Both barrels were placed outside for 24 hours to start the process.
3. The barrels were photographed, placed inside for 6 hours.
4. The barrels were then placed outside for another 18 hours.
5. The barrels were photographed, placed inside for 6 hours. etc.
